

# Panorama Revo

The new development in roller shutter technology

With new functionality  
for optimal sun protection in every position

## The Innovation

### Optimal sun protection

**Panorama Revo** is the newly developed roller shutter with tilting blinds that comes out of the box with the blinds already open.

The large opening angle allows excellent view outside and allows plenty of indirect daylight come inside. Therewith the **Panorama Revo** offers **optimal sun protection** in every position.

When the end slat touches down, the blinds begin to close from bottom to top. This enables privacy protection in the lower area and the **light and air inlet** can be used at the top.

### Thermal insulation and weather resistance

In the closed position, the **Panorama Revo** contributes to **thermal insulation** and provides complete privacy. The extruded and powder-coated aluminium profiles have high stability when blinds are tilted or closed. This ensures **weather resistance** and serves security.

### Plus insect protection

The **Panorama Revo Plus** product variant also offers the convenience of an **insect screen** integrated in the roller shutter curtain. This is made of durable stainless steel mesh.

## Technology

### Sizes:

- Profile dimensions ca. 8 x 37 mm
- only as curtain rolling outwards
- min. width 48 cm
- max. width 200 cm
- max. area 5.0 sqm

### Curtain colours:

- anthracite, natural, light grey, white

### Complete roller shutters:

Available as aluminium front mounted roller shutter in standard designs and several colours

### Operations:

- belt or crank gear
- wired motor drives
- radio motor drives
- solar motor drives
- smart home systems

**Please note** that the Panorama Revo roller shutter system does not offer total blackout and irregular light reflections can occur, especially in the area of the light and air openings, even when closed.
